Company Information

Yasoo Health brings together the best of medical and clinical science, nutrition, formulation and process technology. Science, quality and service are the cornerstones of our company.

For healthy people we are developing products for today’s lifestyles. These products will promote wellness of body and mind, help prevent chronic diseases and delay the ravages of aging.

For patients suffering from chronic diseases, Yasoo Health is developing innovative products, based on the latest science, that improve quality of life, slow down the progression of disease and reduce the risk of complications.

<tr>
<td>Total tocopherols, minimum</td>
<td>720 mg</td>
<td>NE</td>
</tr>
</tbody>
</table>

Other ingredients: Gelatin, glycerin, water, natural caramel color. Free of preservatives, soy, corn, yeast, wheat, starch, egg, milk, glucose and sugar.

NE= Not Established.

Dosage

Take one or more softgels daily (maximum of 4) with meals or as directed by a physician.

How Supplied

Supplied in 60 softgels per bottle.

How Vitamin E Factor™ Maxi-Gamma™ Functions

Vitamin E is a family of eight compounds – four tocopherols and four tocotrienols. Vitamin E is an antioxidant and serves to trap free radicals. In addition, vitamin E may have different functions including decreasing the activity of protein kinase C and modulating platelet adherence and aggregation based on in vitro studies.

Gamma-tocopherol is found in food in higher amounts than alpha-tocopherol. Gamma-tocopherol is more effective than alpha-tocopherol in increasing the activity of the antioxidant enzyme superoxide dismutase (SOD) in plasma and arterial tissues. Gamma-tocopherol increases nitric oxide generation, which helps support healthy arterial function. Gamma-tocopherol is more effective than alpha-tocopherol in neutralizing nitrogen radicals that are associated with damage in disease states such as arthritis and Alzheimer’s. A metabolite of gamma-tocopherol named 2,7,8-trimethyl-2-(gamma-carboxyethyl)-6-hydroxychroman (gamma-CEHC), may help regulate fluid and electrolyte balances as a natural diuretic.

In a study funded by the National Cancer Institute, high blood levels of gamma-tocopherol were associated with a lower risk of prostate cancer. Ongoing research suggests that gamma-tocopherol has anti-inflammatory properties.

However, no claims regarding vitamin E have been approved by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.
Yasoo Research

Yasoo Health will integrate three major fields of knowledge in order to develop a steady stream of disease-specific products:

1. Clinical and medical science as it relates to the role of nutrients and phytochemicals in nutrition and health.
2. Formulation technology, especially as it relates to the development of products to address specific needs such as malabsorption and inflammation.
3. Identification, extraction and/or synthesis of high value, naturally occurring compounds.

Evidence of Yasoo Health’s commitment to research is the award of a Small Business Innovation Research Grant (SBIR) by the National Institutes of Health for the development of a disease specific product for cystic fibrosis patients. Additional research projects will address inflammatory bowel disease, diabetes, multiple sclerosis and thalassemia.

Yasoo People

**Dr. Papas**, the president of Yasoo Health, is an Adjunct Professor at the College of Medicine at East Tennessee State University and a Senior Scientific Advisor of the Cancer Prevention Institute at Harvard’s School of Epidemiology. He is the author of the *Vitamin E Factor* (HarperCollins, 1999) and editor of the scientific book *Antioxidant Status, Diet, Nutrition and Health* (CRC Press, 1998). He combines 25 years of academic and industrial experience in nutraceuticals.

A world-class Scientific Advisory Board provides advice for Yasoo Health’s research programs and makes recommendations to our management team on how to incorporate breakthrough research findings in our products. Dr. Nicolaou, the Chair of the Scientific Advisory Board of Yasoo Health, is the Chairman of the Chemistry Department at Scripps Research Institute. Dr. Nicolaou is a world authority in chemical synthesis and chemical biology.
